

English Summary - Utility Model BG 5377 U1

Extruded Oil-Resistant Elastomer Compound

Important: This document is an English-language summary prepared for international business communication. It is not an official translation and does not replace the original Bulgarian utility model documentation.

Bibliographic information

Owner	MARIO 10 ZKU EOOD
Inventor	Petar Slavchev Asenov
Registration	BG 5377 U1
Application	No. 6866
Application date	25 March 2026
Publication date shown	15 April 2026
Term shown	Until 25 March 2030
Classification	Int. Cl. C 08 L 7/00
Issuing authority	Patent Office of the Republic of Bulgaria

Technical overview

The utility model relates to an oil-resistant elastomer compound based on NBR and intended for extrusion and the manufacture of vulcanized technical rubber profiles and components. The original document describes the composition and its use in technical rubber applications where oil resistance is a key requirement.

Key points from the original document

- The development is an NBR-based oil-resistant elastomer formulation.
- It is intended for extrusion and subsequent vulcanization of technical rubber profiles/components.
- The registration directly supports Mario 10's material-engineering and in-house compound-development positioning.

Use on the Mario 10 website

Recommended website wording: "Registered Bulgarian utility model for an NBR-based oil-resistant elastomer compound intended for extruded profiles and vulcanized technical rubber components."
